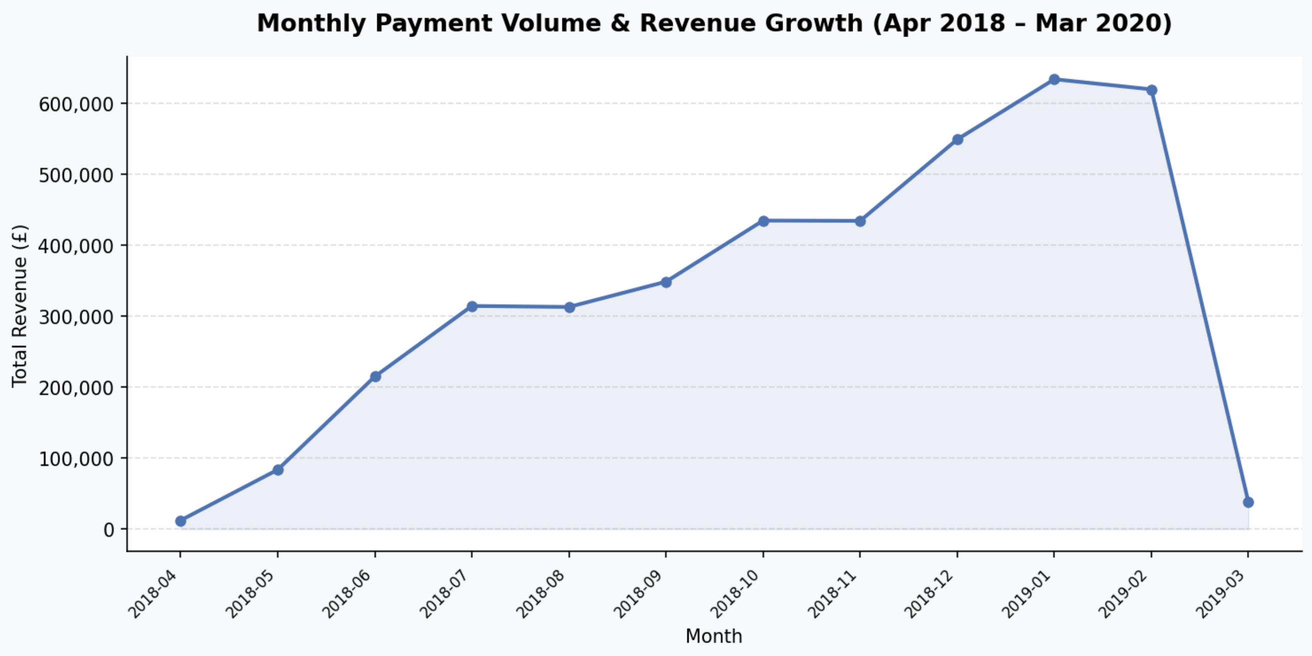
1 Monthly Payment Volume & Revenue Growth (Apr 2018 – Mar 2020)

Tracks the platform's growth trajectory over time, revealing the explosive ramp-up from soft launch through plateau. Helps identify inflection points and assess whether growth is sustained or decelerating heading into Mar 2020.

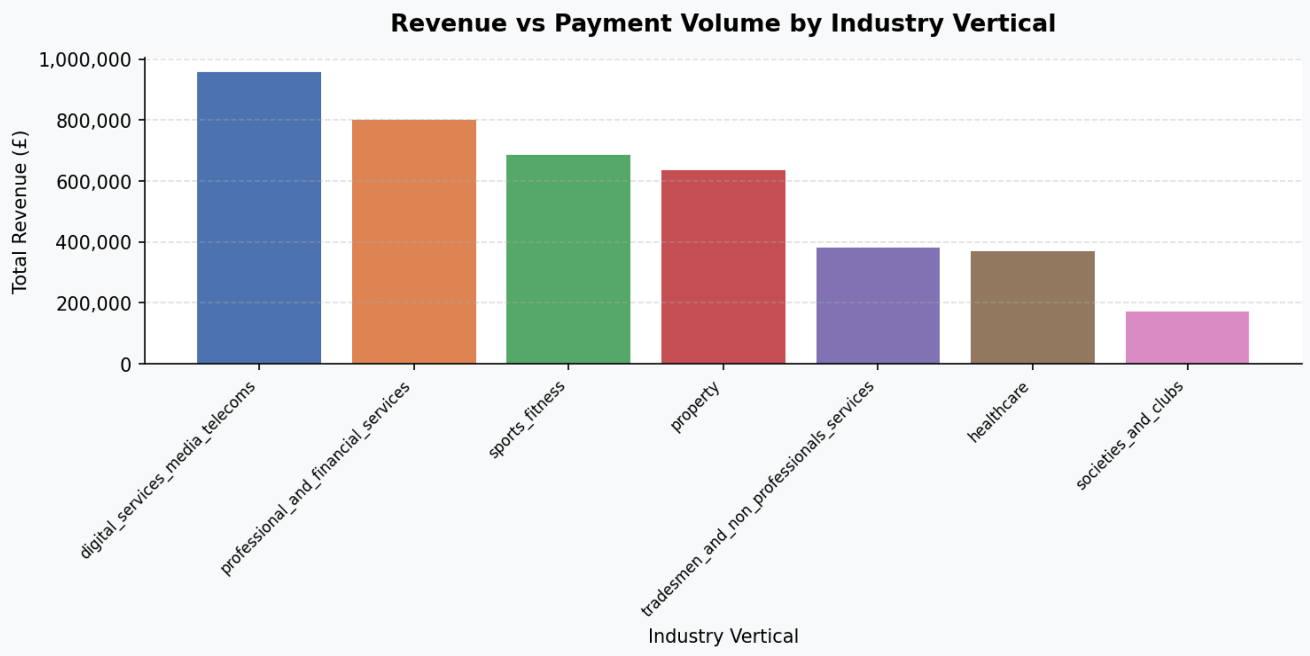


- Explosive early ramp-up:** Payment volume surged from 104 in Apr 2018 to 5,078 by Jan 2019—a ~49x increase in just 9 months—with the steepest single-month jump occurring in May–June 2018 (+193% volume growth).
- First plateau signal emerged early:** Revenue stalled between Jul–Aug 2018 ($314K vs. $313K), suggesting early saturation risk before growth resumed, indicating the platform needed active intervention to re-accelerate.
- Revenue per payment stayed relatively stable:** Average transaction value hovered around $120–$136 across the visible months (e.g., $125 in Jan 2019), suggesting volume growth—not pricing expansion—was the primary revenue driver.

```
SELECT DATE_FORMAT(p.created_at, '%Y-%m') AS Month, SUM(p.amount) AS Total_Revenue, COUNT(p.id) AS
Payment_Volume FROM payments p JOIN mandates m ON p.mandate_id = m.id JOIN organisations o ON m.organisation_id
= o.id WHERE p.currency = 'GBP' AND p.created_at >= '2018-04-01' AND p.created_at < '2020-04-01' GROUP BY
DATE_FORMAT(p.created_at, '%Y-%m') ORDER BY Month ASC LIMIT 30
```

2 Revenue vs Payment Volume by Industry Vertical

Contrasts which verticals generate the most money versus the most transactions, exposing the high-value/low-volume (Digital Services, Property) vs high-volume/low-value (Sports & Fitness, Tradesmen) strategic split. Critical for pricing and acquisition decisions.

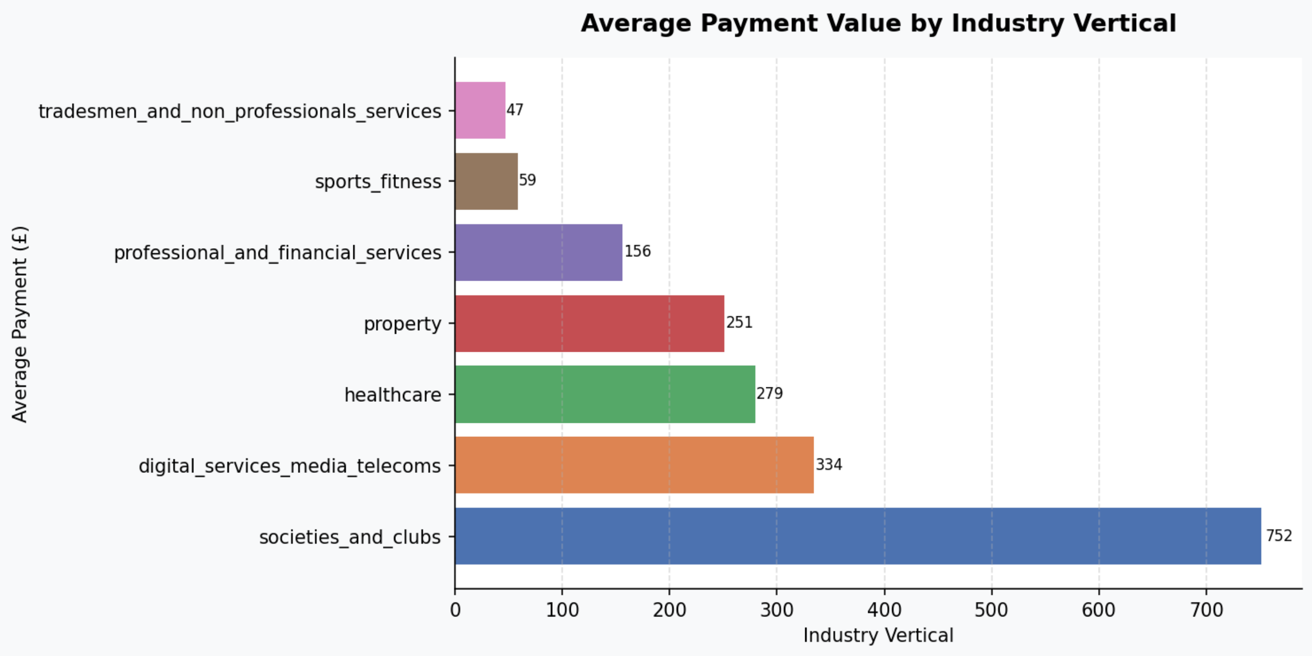


- Societies & Clubs** commands the highest average payment at **£751.56** despite generating the fewest transactions (**228**), making it a premium niche worth protecting despite low revenue contribution (£171K).
- Digital Services** leads total revenue at **£958K** with a strong **£334 avg payment** and only **2,869 transactions** — the most efficient vertical by revenue-per-transaction ratio, ideal for acquisition focus.
- Sports & Fitness and Tradesmen** collectively process **19,734 transactions** but average just **£58.80 and £47.25** respectively — high operational load with lower margins, signaling a need for volume-based pricing or automation to protect profitability.

```
SELECT o.parent_vertical AS industry_vertical, SUM(p.amount) AS total_revenue, COUNT(p.id) AS payment_count,
AVG(p.amount) AS avg_payment_amount FROM payments p JOIN mandates m ON p.mandate_id = m.id JOIN organisations o
ON m.organisation_id = o.id WHERE p.currency = 'GBP' AND o.parent_vertical IS NOT NULL GROUP BY
o.parent_vertical ORDER BY total_revenue DESC LIMIT 30
```

3 Average Payment Value by Industry Vertical

Ranks verticals by average transaction size to identify premium segments. Highlights that Digital Services customers pay nearly 6x more per transaction than Tradesmen, informing customer lifetime value estimates and targeted upsell strategies.

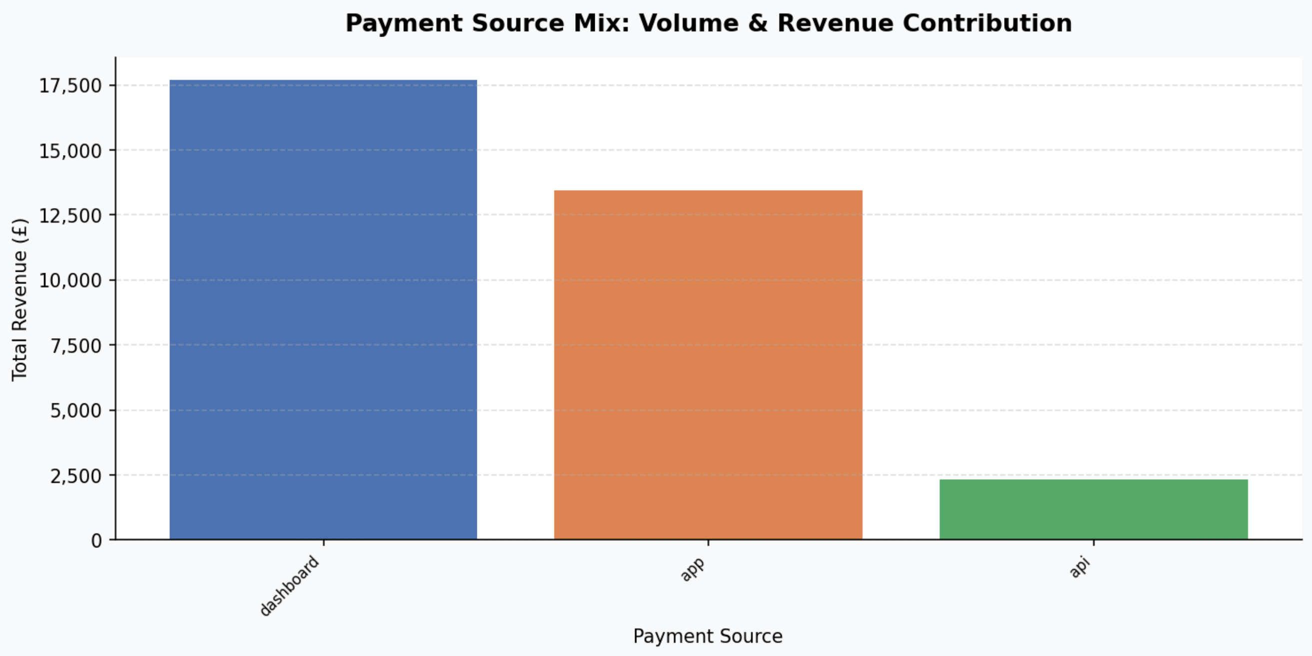


- Societies & Clubs dominates** with an average payment of £751.56 — more than 2.2x higher than the second-ranked Digital Services & Media (£334.00), making it the clear premium segment despite likely lower transaction volume.
- Digital Services vs. Tradesmen gap is stark**: at £334 vs. £47, Digital Services customers pay 7x more per transaction than Tradesmen, signalling significantly higher CLV potential and stronger upsell opportunity.
- A sharp mid-tier cliff exists**: Professional & Financial Services (£156) drops to Sports & Fitness (£59) — a 62% decline — suggesting the bottom two verticals (Sports, Tradesmen) require volume-driven rather than value-driven revenue strategies.

```
SELECT o.parent_vertical, AVG(p.amount) AS average_payment FROM payments p JOIN mandates m ON p.mandate_id =
m.id JOIN organisations o ON m.organisation_id = o.id WHERE p.currency = 'GBP' GROUP BY o.parent_vertical ORDER
BY AVG(p.amount) DESC LIMIT 30
```

4 Payment Source Mix: Volume & Revenue Contribution

Shows how Dashboard, App, and API channels compare on both payment count and revenue share. Reveals the App channel's deprecation after Mar 2019 and the API channel's premium positioning, informing channel investment and migration planning.

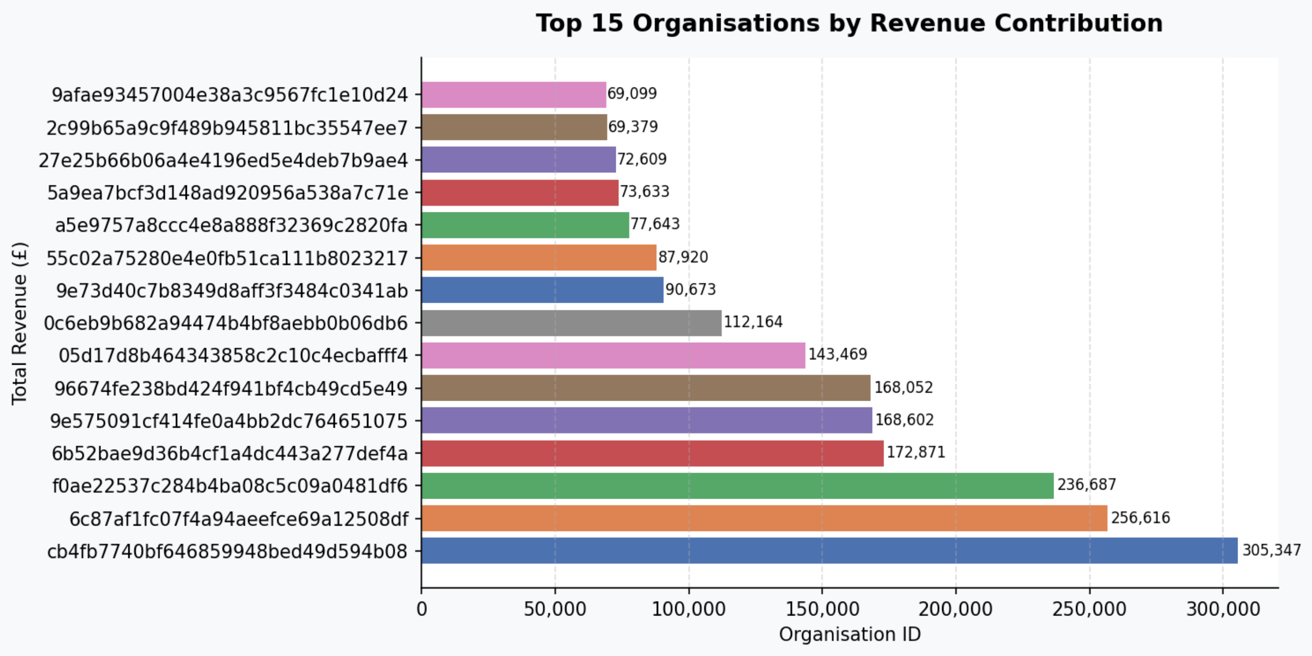


- API commands premium value**: Despite only 2,316 payments (7% of volume), the API channel averages $185.34 per transaction—18% higher than Dashboard ($156.50) and 2.3x the App channel's $80.39 average.
- Dashboard dominates volume and revenue**: With 17,693 payments generating $2.77M, Dashboard accounts for 53% of total volume and 64% of total revenue, making it the critical channel to maintain and optimize.
- App deprecation leaves significant gap**: The App channel contributed 13,452 payments and $1.08M revenue before its March 2019 sunset. Its low $80.39 average payment suggests migrating these users to Dashboard or API could meaningfully lift overall revenue per transaction.

```
SELECT p.source, COUNT(p.id) as payment_count, SUM(p.amount) as revenue, AVG(p.amount) as avg_payment FROM payments p GROUP BY p.source LIMIT 30
```

5 Top 15 Organisations by Revenue Contribution

Visualises the long-tail revenue concentration, showing how a handful of organisations dominate total revenue. The top org alone accounts for 7.6% of GBP revenue. Essential for key account management and churn risk assessment.

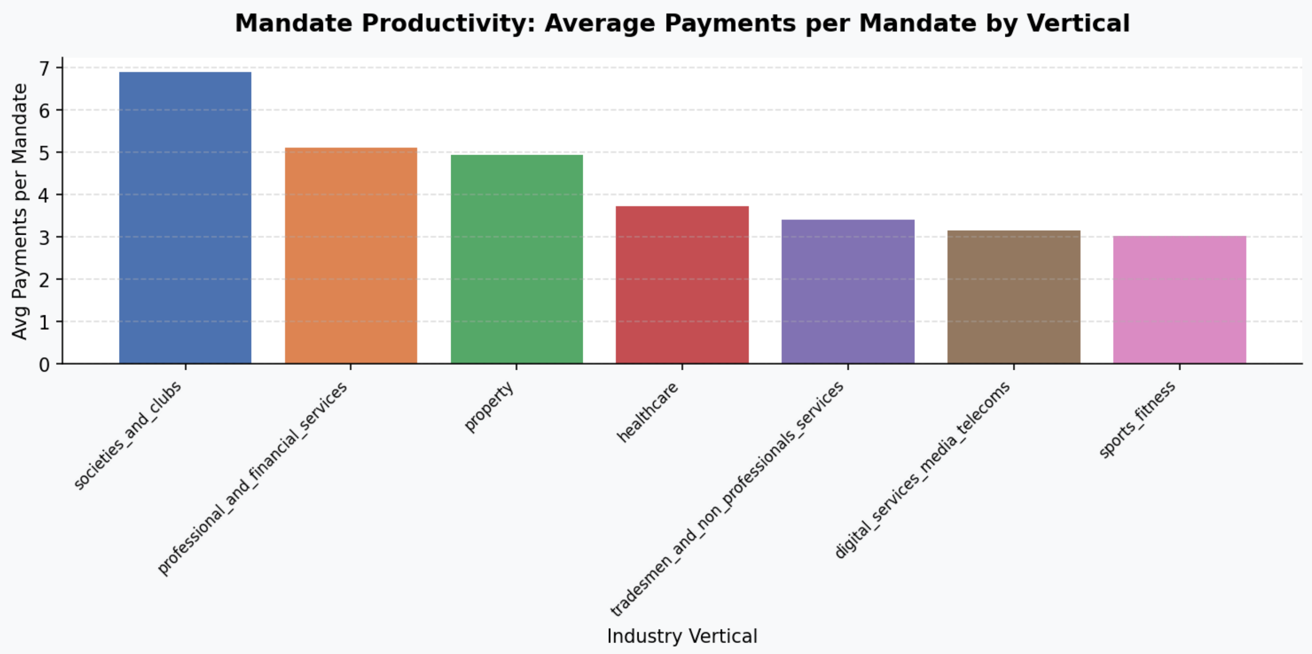


- The top organisation (cb4fb7...) generates £305,347, nearly 19% more than the second-ranked org (£256,617), indicating a single dominant account with outsized churn risk.
- The top 3 organisations collectively contribute ~£798,650, suggesting extreme revenue concentration at the very peak — losing any one would materially impact total GBP revenue.
- Revenue drops sharply from rank 1 (£305,347) to rank 10 (£87,920) — a 71% decline — confirming a steep long-tail curve where the bottom tier accounts contribute disproportionately less, warranting tiered account management strategies.

```
SELECT o.id AS organisation_id, SUM(p.amount) AS total_revenue FROM payments p JOIN mandates m ON p.mandate_id
= m.id JOIN organisations o ON m.organisation_id = o.id WHERE p.currency = 'GBP' GROUP BY o.id ORDER BY
SUM(p.amount) DESC LIMIT 15
```

6 Mandate Productivity: Average Payments per Mandate by Vertical

Measures how actively mandates are being used across verticals — a proxy for customer engagement and recurring billing health. Low utilisation may signal mandates created but not actioned, representing unrealised revenue.

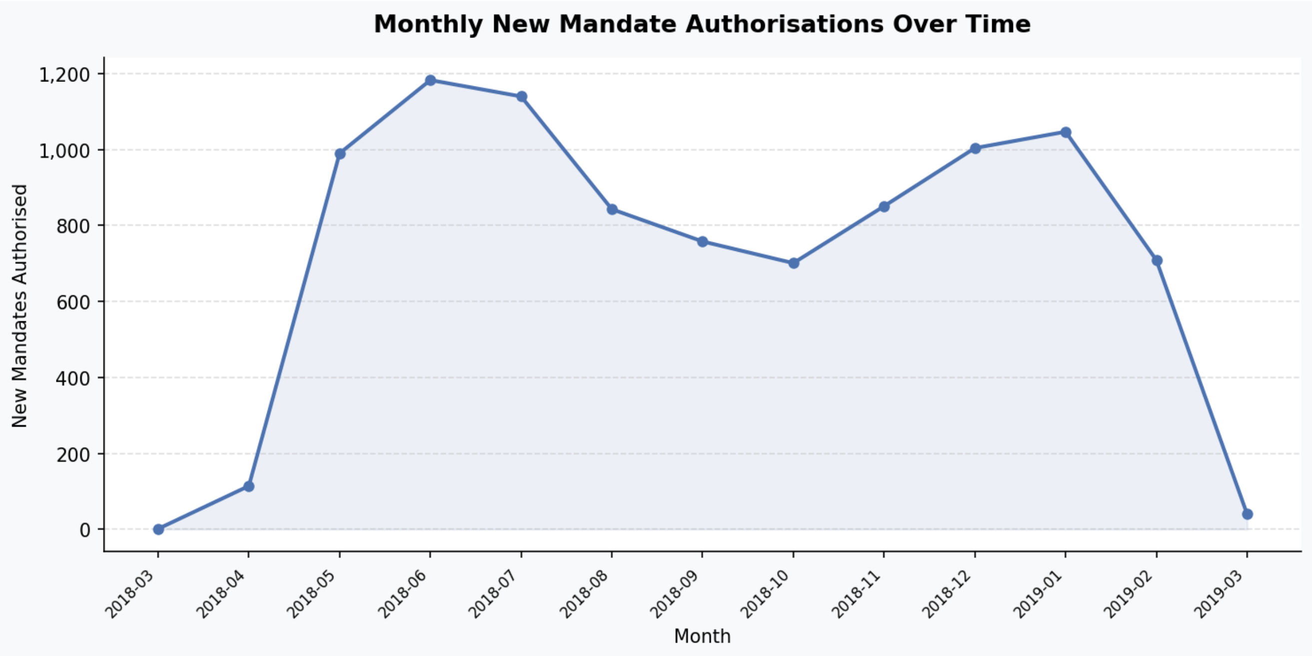


- Societies & clubs leads mandate utilisation at 6.9x avg payments**, nearly 35% higher than the next vertical (professional & financial services at 5.1), suggesting strong recurring billing cadence and engaged membership bases.
- A clear mid-tier gap exists**: property (4.9) and healthcare (3.7) sit well below the top two but above the remaining three, indicating moderate but improvable engagement where targeted activation could yield meaningful revenue uplift.
- Sports & fitness has the lowest utilisation at 3.0 payments per mandate** — despite being a naturally recurring-billing sector — flagging a significant unrealised revenue risk where mandates are likely created but inconsistently actioned.

```
SELECT o.parent_vertical AS `Industry Vertical`, COUNT(p.id) / COUNT(DISTINCT m.id) AS `Avg Payments per Mandate` FROM mandates m JOIN organisations o ON m.organisation_id = o.id LEFT JOIN payments p ON p.mandate_id = m.id WHERE m.scheme IN ('bacs', 'sepa') GROUP BY o.parent_vertical ORDER BY `Avg Payments per Mandate` DESC LIMIT 30
```

7 Monthly New Mandate Authorisations Over Time

Tracks the rate at which new end-customers are granting direct debit permissions, serving as a leading indicator of future payment volume. A slowdown in mandate creation predicts revenue growth deceleration before it appears in payment figures.



- Peak then decline:** New mandates surged from 1 in March 2018 to a peak of 1,183 in June 2018, then fell 40% to 701 by October — signaling a significant slowdown in customer acquisition that likely preceded a revenue deceleration.
- Trough recovery underway:** After bottoming at 701 in October 2018, mandates rebounded to 1,004 by December, a 43% recovery — suggesting renewed pipeline momentum heading into 2019.
- Sustained below-peak volume:** Despite the December recovery, mandates remained 15% below the June peak, indicating acquisition has not fully returned to its highest rate and future payment volumes may remain constrained.

```
SELECT DATE_FORMAT(m.created_at, '%Y-%m') as month, COUNT(m.id) as new_mandates FROM mandates m GROUP BY
DATE_FORMAT(m.created_at, '%Y-%m') ORDER BY month ASC LIMIT 30
```
