1 Monthly Payment Volume & Revenue Trend (Mar 2018 – Mar 2020)

Tracks how total payment count and GBP revenue have grown over time, revealing seasonality, growth phases, and any revenue dips that need attention.

- Explosive early growth:** Payment volume surged from just 1 transaction in Mar 2018 to 4,289 by Dec 2018, representing a 4,000x+ increase in 9 months, with revenue scaling proportionally from £0.50 to £5,494.
- Revenue-per-payment compression:** In Apr 2018, average revenue per payment was £1.18; by Dec 2018 it dropped to £1.28 — but Aug 2018 shows a dip where revenue (£3,132) slightly *fell* despite volume rising from Jul's 2,302 to 2,431, signaling a pricing or mix issue.
- Consistent Oct–Nov plateau:** Payments grew 6% (3,713→3,953) but revenue was virtually flat (£4,350→£4,346), suggesting volume growth stalled in monetization efficiency heading into Q4.

```
SELECT DATE_FORMAT(p.created_at, '%Y-%m') AS month, COUNT(*) AS total_payment_count, SUM(p.amount / 100) AS total_revenue_gbp FROM payments p JOIN mandates m ON p.mandate_id = m.id JOIN organisations o ON m.organisation_id = o.id WHERE p.currency = 'GBP' AND p.created_at >= '2018-03-01' AND p.created_at < '2020-04-01' GROUP BY DATE_FORMAT(p.created_at, '%Y-%m') ORDER BY month ASC LIMIT 30
```

2 Revenue by Industry Vertical

Compares total GBP revenue contributed by each industry vertical to identify the highest-value customer segments and guide sales/marketing prioritisation.

- Digital Services, Media & Telecoms** is the top-performing vertical at £9,582, contributing 23% of total revenue (£40,989), making it the clear priority for sales and marketing investment.
- The top 3 verticals** (Digital Services, Professional & Financial Services, Sports & Fitness) collectively generate £24,439 — nearly 60% of total revenue — suggesting concentrated opportunity in these segments.
- Societies & Clubs** is the lowest-value vertical at £1,714, generating 4.2% of total revenue and less than one-fifth of the top vertical's contribution, indicating it warrants reduced resource allocation or a targeted growth strategy.

```
SELECT o.parent_vertical AS `Industry Vertical`, SUM(p.amount / 100) AS `Total Revenue (£)` FROM payments p
JOIN mandates m ON p.mandate_id = m.id JOIN organisations o ON m.organisation_id = o.id WHERE p.currency =
'GBP' GROUP BY o.parent_vertical ORDER BY `Total Revenue (£)` DESC LIMIT 30
```

3 Payment Count by Industry Vertical

Shows transaction volume per vertical so that high-volume but lower-value verticals (e.g. Sports & Fitness) can be distinguished from high-value, lower-volume ones (e.g. Digital Services).

- Sports & Fitness dominates transaction volume** with 12,170 payments—50% more than the second-highest vertical (Tradesmen at 8,080) and 3x more than Professional & Financial Services (5,126).
- Digital Services ranks 4th in volume** with only 3,995 payments, confirming its high-value, lower-frequency profile compared to high-volume verticals like Sports & Fitness and Tradesmen combined (20,250 payments).
- Societies & Clubs is a clear outlier at the bottom**, recording just 228 payments—roughly 98% fewer than Sports & Fitness—suggesting a niche, likely member-subscription-based model where individual transaction value may compensate for minimal volume.

```
SELECT o.parent_vertical, COUNT(p.id) AS number_of_payments FROM payments p JOIN mandates m ON p.mandate_id = m.id JOIN organisations o ON m.organisation_id = o.id GROUP BY o.parent_vertical ORDER BY number_of_payments DESC LIMIT 30
```

4

Payment Source Mix: Volume vs Revenue Share

Compares dashboard, app, and API channels across both payment count and total revenue to reveal which integration channel drives the most value and where to invest in tooling.

- Dashboard dominates both metrics**: With 16,956 payments (53% of volume) generating £25,936 (63% of revenue), the dashboard channel delivers the highest revenue-per-payment at ~£1.53, making it the clear priority for tooling investment.
- App shows volume-revenue mismatch**: Despite handling 13,045 payments (41% of volume), app generates only £10,459 (26% of revenue) at ~£0.80 per payment — less than half the dashboard rate — signaling lower-value transactions or pricing inefficiencies.
- API is underpenetrated but efficient**: Only 1,792 payments (6% of volume) yet yields £3,594 (~£2.01 per payment), the highest revenue-per-transaction of all channels, suggesting strong ROI potential if API adoption is scaled.

```
SELECT source AS `Payment Source`, COUNT(*) AS `Payment Count`, SUM(amount / 100) AS `Total Revenue (£)` FROM payments WHERE currency = 'GBP' GROUP BY source ORDER BY `Total Revenue (£)` DESC LIMIT 30
```

5

Mandate Productivity by Scheme (Avg Payments per Mandate)

Contrasts BACS and SEPA_CORE mandates on average payments generated per mandate, quantifying the 30% productivity premium of SEPA and informing scheme expansion decisions.

- SEPA_CORE mandates generate an average of 5.36 payments per mandate, compared to 3.91 for BACS — a difference of 1.45 additional payments per mandate.
- SEPA_CORE delivers a ****37% productivity premium**** over BACS (not 30%), meaning each SEPA mandate drives significantly more revenue utilization than its BACS counterpart.
- For scheme expansion decisions, migrating or acquiring mandates under SEPA_CORE could yield approximately ****1.45 more transactions per mandate****, compounding materially at scale — prioritizing SEPA growth over BACS could substantially improve collection efficiency.

```
SELECT m.scheme AS `Payment Scheme`, COUNT(p.id) / COUNT(DISTINCT m.id) AS `Avg Payments per Mandate` FROM
mandates m JOIN payments p ON p.mandate_id = m.id WHERE m.scheme IN ('BACS', 'SEPA_CORE') GROUP BY m.scheme
ORDER BY `Avg Payments per Mandate` DESC LIMIT 30
```

6

Average Payment Value by Industry Vertical

Reveals which verticals command the highest average transaction size, helping prioritise upsell efforts and identify verticals with premium pricing power.

- Societies & Clubs dominates** with an average payment value of £7.52 — more than double the next highest vertical (Digital Services at £3.34), signalling strong upsell potential and premium pricing power worth prioritising.
- A sharp mid-tier drop-off exists**: Healthcare (£2.79) and Property (£2.51) cluster closely together, while Professional & Financial Services falls to £1.56 — a 38% decline suggesting pricing pressure or lower-value transaction types in that segment.
- Sports/Fitness and Tradesmen are low-value outliers** at £0.59 and £0.47 respectively — roughly 16x below Societies & Clubs — indicating either volume-driven models or untapped upsell opportunities requiring targeted intervention.

```
SELECT o.parent_vertical AS `Industry Vertical`, AVG(p.amount / 100) AS `Average Payment Value (£)` FROM
payments p JOIN mandates m ON p.mandate_id = m.id JOIN organisations o ON m.organisation_id = o.id WHERE
p.currency = 'GBP' AND o.parent_vertical IS NOT NULL GROUP BY o.parent_vertical ORDER BY `Average Payment Value (£)` DESC LIMIT 30
```

7

New Mandate Creation vs New Organisation Onboarding Over Time

Overlays monthly new mandate authorisations against new organisation sign-ups to assess whether existing merchants are expanding their customer base or whether growth is purely driven by new merchant acquisition.

- Mandate growth decoupled from org onboarding:** New mandates surged from 114 to 990 (+768%) between April and May 2018, while new organisations only grew from 132 to 153—confirming existing merchants rapidly expanded their customer base.
- Org onboarding stopped entirely after June:** Zero new organisations were recorded from July 2018 onwards, yet mandates remained substantial (701–1,183/month), proving sustained growth was driven entirely by existing merchants acquiring new customers.
- Peak mandate volume coincided with last active onboarding month:** June 2018 saw the highest mandates (1,183) alongside 136 new organisations, suggesting the final onboarding cohort immediately activated high-volume mandate collection upon joining.

```
SELECT month, SUM(new_mandates) AS new_mandates, SUM(new_organisations) AS new_organisations FROM ( SELECT
DATE_FORMAT(created_at, '%Y-%m') AS month, COUNT(*) AS new_mandates, 0 AS new_organisations FROM mandates GROUP
BY DATE_FORMAT(created_at, '%Y-%m') UNION ALL SELECT DATE_FORMAT(created_at, '%Y-%m') AS month, 0 AS
new_mandates, COUNT(*) AS new_organisations FROM organisations GROUP BY DATE_FORMAT(created_at, '%Y-%m') )
combined GROUP BY month ORDER BY month LIMIT 30
```
